

MIGUEL A. RUIZ

SOFTWARE ENGINEER

(904) 240-6265 | miguelruizjax@gmail.com | [linkedin.com/in/miguel-ruiz-02860732](https://www.linkedin.com/in/miguel-ruiz-02860732) | www.miguelcoding.com

PROFESSIONAL EXPERIENCE

Sonalysts, Inc

Software Engineer, October 2022-Present

- Developed a python script architecture using Threads to generate over a million xml profiles that feed into a simulation. Saving substantial development time and resources in testing the simulator's capabilities with monte-carlo runs in production.
- Implemented Git-flow CI/CD architecture with Jira, Confluence and Bitbucket products. leading to stabilized product releases and improved customer engagement.
- Integrated an XY plot scaling element to a C++ simulator project using QT, enabling statisticians to disseminate graph information accurately without generating new data.
- Developed a live data feed event generator that auto-updates simulation events through a TCP connection to a remote display.
- Redesigned the use of multi-object display and tracking in QT from a single object. This change in architecture allowed for greater engagement of customers as their varied needs could be satisfied in a single product.

CVS Health

Associate Software Development Engineer, June 2022 – October 2022

- Developed REST/Spring/Java/Maven applications as part of a payment backend architecture, managing payment systems with third-party vendors.
- Implemented software development best practices to detect bugs during hacker attacks.
- Acquired Agile Team Member Certification.
- Developed and maintained React/Node.js based mock-ups for testing deployment changes on mobile and desktop environments.
- Integrated TensorFlow object detection models into React applications for testing proof of concepts and user experience enhancement.

U.S. NAVY

Avionics Electronics Technician, September 2012-October 2017

- Attained and secured a Secret Clearance that allowed me to troubleshoot classified systems on the EA-18G Growler fighter Aircraft. Achieved the Supervisor role that maintained the avionics and navigatio systems found in the aircraft, on land and on the Carrier Flight Deck.
- Honourably separated with E-5 Rank after multiple meritorious achievements.
- Aviation Electronics Technician Second Class (E5) US Navy. Four years' experience troubleshooting automated test equipment to the component level as an Intermediate level technician.

- Maintained and repaired inflight navigation, and detection systems on aircraft.
- Bench tested and maintained radar systems, tactical displays, communication systems, and aircraft digital data systems.
- Skilled in tracing schematic diagrams, analyzing circuit boards, troubleshooting problems, and referencing to technical manuals to resolve problems.
- Experienced in use of hand tools and specialized test equipment (Digital multimeter, Oscilloscope Signal Analyzers).
- Planned and scheduled maintenance priorities for junior technicians to delegate work effectively.
- Encouraged conscientious efforts to create a team-oriented environment.
- Diagnosed production needs and problems.

Artificial Intelligence Club – Oregon State University

President, May 2020 - May 2021

- Established a mentee relationship with faculty, enabling the Club to have a faculty mentor.
- Organized guest events with professionals and faculty to discuss their projects and events.
- Conducted presentations on various topics, including Machine Learning, NLP, Computer Vision, Neural Networks, and Object Detection.
- Led the development stages for an object detection project using Pytorch for data management and model fine-tuning

OFFSET – Oregon State University

Field Tech - Software Engineer, July 2020 – August 2020

- Assisted with the calibration, deployment, and maintenance of over 100 autonomous vehicles (Drones-UGV's). As well as leading the troubleshooting effort to diminish network connectivity issues within the swarm vehicles and mission control.

EDUCATION

Oregon State University – Corvallis, OR

B.S. Computer Science, March 2022

Applied Computer Science

Undergraduate Research SEP2018 - SEP 2019

- Troubleshoot and repaired 8 non-functioning Pioneer 3DX “UGV”.
Calibrated their Lidar and communications through ROS with Python written nodes.
- Helped deploy scalable algorithms on rescue domains designed for multi-robot asynchronous execution.

CERTIFICATIONS AND SKILLS

- Fundamentals of Deep Learning - Nvidia
- Python, node.js, REST API's, Agile,
- HTML, CSS, OPEN-AI, ROS, REACT, JSON
- JavaScript, React.js, Node.js
- AWS, Google Cloud, Pytorch, Tensorflow
- C++, CSS, HTML, KOTLIN, R, Linux, JUnit, Postman, IntelliJ IDE, Eclipse
- Familiarity with: C, SQL, .NET, C#, Jenkins
